DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, 32-33 and 37 drawn to a method for measuring the molecular mass, classified in class 436, subclass 173.
- II. Claims 18-19 and 26-31, drawn to a kit for the production of calibration compounds, classified in class 564.
- III. Claims 20-25, drawn to a set of calibration compounds, classified in class 585, subclass 24+.
- IV. Claims 34-36, drawn to a mixture of compounds, classified in class 149, subclass 36.

The inventions are distinct, each from the other because of the following reasons:

Inventions II-IV and I are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the products of inventions II-IV can be used for various organic syntheses, involving compounds R-X, where R is a trityl group. Trityl group is a well-known protecting group in organic and bioorganic synthesis.

Inventions II and III-IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed, because it does not require a mixture of at least two different compounds of formula R-X with different molecular masses. The subcombination has separate utility such as a reagent mixture for combinatorial organic synthesis.

Art Unit: 1743

Inventions III and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed, because the subcombination can have two compounds of the same molecular mass. The subcombination can be used for completely different type of organic synthesis than the combination.
